Mother & Child Care

ECG monitoring

A fetal monitoring solution designed around you

Fetal direct ECG monitoring

Philips spiral electrodes are designed for easy and safe use. Plus, our uniquely designed fetal direct ECG (DECG) Reusable Legplate Adapter Cable makes cleaning more accessible than ever.

Every part of the system – the Fetal Spiral Electrode, DECG Reusable Legplate Adapter Cable and disposable Attachment Electrode – has been designed around the way you work.

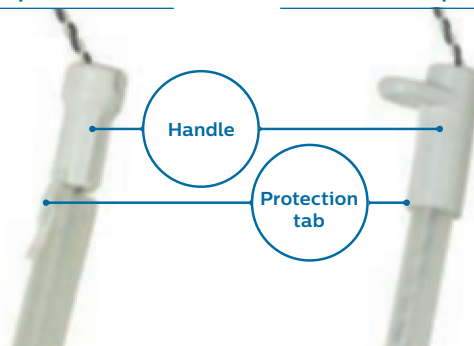

The handle features a protection tab that keeps the spiral tip inside the tube during insertion. This feature is intended to prevent accidental puncture to the mother's birth canal, the fetus or your fingertips. The protection tab also serves as a visual reference point to indicate how far the spiral has turned when attaching the electrode.

In addition, a simple connector plugs securely into the legplate adapter cable to deliver accurate, reliable fetal heart rate readings.

Fetal Double-Spiral Electrode

Simple to clean

An improved legplate adapter cable is a one-piece, seamless design. The electronics are completely sealed, so you can safely immerse it in most cleaning and disinfection fluids. The Attachment Electrode connection socket is also sealed, so body fluids are less likely to enter during monitoring. Finally, a convenient flushing port makes it more accessible to clean the inside of the connector if needed. The Philips system is truly a great solution.

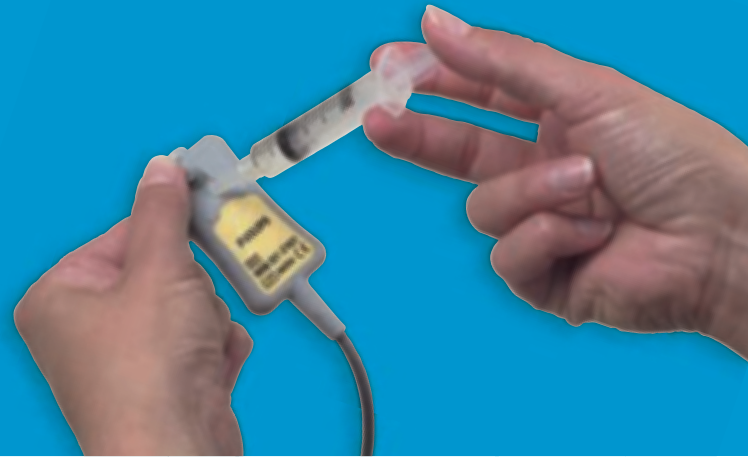

A versatile performer

Philips fetal monitoring system has been tested and verified to deliver accurate signals and performance with Philips fetal monitors.

It's all part of Philips commitment to bringing you the most advanced technology built to the highest standards of quality.

Fast cleaning

A convenient flushing port allows you to wash out the inner chamber.
